

COS 498

Assignment 1

10pts

Due: Sept 17th, 11:59pm

1 Assignment Description

Create your static webpage on one of the class servers (umainecos.org or toastcode.net).

Your site needs to be focused on a specific topic (not just about you) and must contain the requirements listed below.

2 Required Components

2.1 4 HTML Pages

Your website must consist of at least four distinct HTML pages.

2.2 External CSS Sheet

One external CSS file that is used by all pages.

2.3 Internal CSS

Each page must contain internal CSS inside a `<style>` tag.

2.4 Styled Navigation Bar

A consistent navigation bar that is used between all four pages.

2.5 Server-hosted Images

Images that are stored on the server (not external images from elsewhere).

2.6 Sufficient Content

Content should be at least half a page, preferably an entire page.

3 Content Guidelines

Choose a specific topic for your website (not just a personal page about yourself). Ensure your content is substantial and informative, aiming for at least half a page of content per page, preferably a full page. Make sure your content is relevant to your chosen topic.

While you can't have a topic about just yourself, you are free to make it about a hobby of yours or an event you attended (are attending).

4 Design and Accessibility

While you will not be graded on aesthetics, please consider the following:

- Avoid conflicting color schemes
- Take accessibility into account with your HTML tags
- Use the `alt` attribute for all images
- Ensure your website is readable and well-structured

5 Technical Requirements

Host your website on either `umainecos.org` or `toastcode.net`. All files must be properly organized and accessible. Ensure all links work correctly and test your website to make sure it displays properly.

6 Point Distribution

Component	Points
4 pages	2pts
Navigation bar	2pts
Internal CSS (style tags)	1pt
External CSS	2pts
Accessibility	1pt
Content length	2pts
No comments in HTML files	-2pts

7 Submission

Submit the URL to your hosted website through Brightspace. Make sure your website is accessible and all requirements are met before submitting.
