

Instructions:

Read the instructions, the table below, and all the questions before starting the assignment. Pay attention to the time limits. Make a copy of this template, share it with me with editor privileges, and submit the link on Brightspace.

Part A: Pull your responses for the column from your Objects chapter reflection (video watch). Place them in the first column here.
(the second column of the object reflection document will go into the first column on this document)

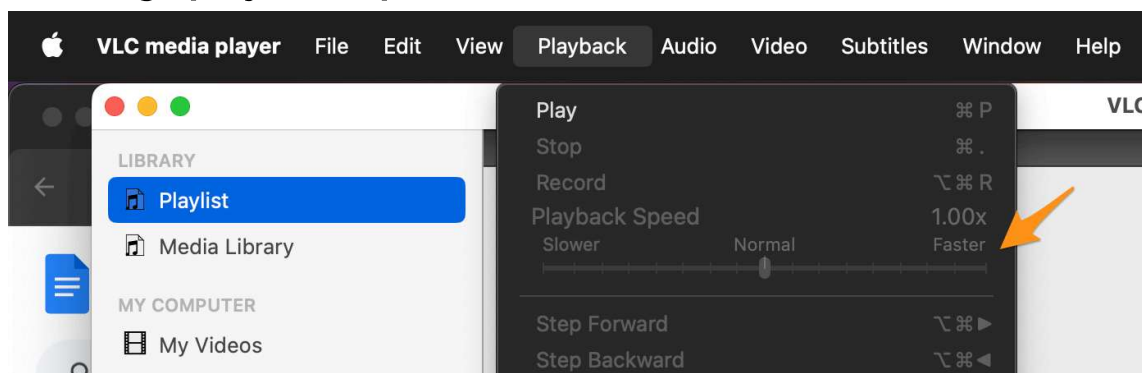

Part B: Record yourself working on the Forms Chapter of the interactive textbook for about 1-1.5 hours - [here are instructions for how to do that](#).

Part C: Describe what happened after viewing the replay, this will go into

You will fill out a column for each step of the reflection process below, then compare and evaluate your reflection with and without the video replay. Answer each question with roughly 3 to 5 bullet points.

Limit yourself to at most 60 minutes for the reflection process. Set timers on your phone to help manage your time.

You are encouraged to watch the video at 2x or higher speed, click through the video, etc. Free software such as VLC player allows you to change playback speed from 1x to 4x.

Part D: Articulate learning

For 15-20 minutes, write 1-2 paragraphs in response to briefly summarize the differences, then write 3-5 bullet points each on the questions on what you learned based on the comparison.

Part C: Describe what happened in each video, then compare and evaluate

Question	Answers for Object Session <i>Write about 3-5 bullet points per question</i>	Answers for Form Session <i>Write about 3-5 bullet points per question</i>	Compare and Evaluate <i>Write about 3-5 bullet points total per question on the difference(s) between your non-video answers and the video answers</i> <i>a) The differences (if any)</i> <i>b) what caused or influenced that difference (if any)</i>
Enter the time you started this part of the assignment	Enter the time you started here: 7:57 (Note: Fill in this entire column without viewing your video. Do not view your replay video yet).	Enter the time when you are just about to start reviewing your video replay: 9:13	N/A
This row is a reminder to watch your video for when you are filling out the “Answers for Session After Reviewing the Video” column.	N/A		N/A
What were you working on?	- I was working on the Objects section in the interactive textbook - I was manipulating the different blocks of code (adding and removing	- I tested basic React components like CheckAnswer, EditMode, and MultipleChoiceQuestion to ensure they were	N/A

	parts) to see what would happen - Thinking about how this information that I am learning can be learned and applied into my project - I tried doing the tasks at the end of the chapter, and I realized that I did not have the environment set up on my personal pc and only my laptop. Since I spend most of my time working on my PC I spent some time working on getting that set up.	rendered correctly. - I checked if elements like input boxes, checkboxes, and dropdowns appeared on the screen and verified their initial states. - In the Form Session, I focused on user interaction by typing answers, clicking checkboxes, and selecting options to see if components were updated properly.	
What progress was made?	- I was able to read through the entire chapter - I obtained a decent understanding of how objects work and how to use them properly - Set up the environment on my pc - Started the tasks but did not finish them all	I completed everything because I am so awesome and cool	N/A
What resources, people, or tools did you work with? For example, Pair-programmer(s), Browser-based generative AI, Cursor or other generative AI IDE extension, Project documentation, API / programming documentation, Stack Overflow, Other person (say who if you feel comfortable doing do), VSCode, ...	- At first I tried to just use it myself from memory - If that was not working I would look back through the text if it was not working - I would after try using AI to see what was not working properly and then would repeat the previous two steps until I got to this point again	- If that was not working I would look back through the text if it was not working - I would after try using AI to see what was not working properly and then would repeat the previous two steps until I got to this point again - I tried to just use it myself from memory but that didn't work	Difference: Causes:
What challenges did you	1. I spent a lot of time	- One challenge was	Difference:

encounter? For example: I tried <doing x> without knowing <key knowledge about an API or how something worked> instead of looking that up first Spent a lot of time on < activity > because <why> Did < x > which seemed okay at the time but that caused <undesirable thing to happen>	setting up my environment because it kept prompting for admin credentials so I thought I was doing something wrong. 2. One of the first challenges I ran into was to stop procrastinating. I was getting easily side tracked and it was hard to keep focused at first. 3. I tried doing the "isCorrect" task but kept running into an issue with capitalization where it was supposed to be returning true when it was returning false.	dealing with async updates, which sometimes caused flaky tests. - I fixed this by wrapping interactions in act. Another issue was querying dynamically changing elements, which	Causes:
How did you respond to each challenge? (after answering this question continue on to the time table)	1. I was able to just read the guide and for the times that I was doing something wrong, I would change it, and that fixed the issues I was having. 2. I threw my phone over on my bed and started playing music which helped me not get sidetracked whenever my phone vibrated. 3. I was able to correct the handling for case sensitivity and I was able to resolve the problem that was occurring.	- I solved it by using flexible selectors like getByText with regex. Working with another person	0%	0%	Difference: None Causes:

Using generative AI to write code	5%	5%	Difference: None Causes:
Using generative AI to understand code or ask questions about APIs, etc	10%	10%	Difference: None Causes:
Using generative AI to debug code	5%	5%	Difference: None Causes:
Using generative AI for planning (after answering this question continue on to the improvement table)	5%	5%	Difference: None Causes:

Improvement

	Answers for Object Session <i>Write about 3-5 bullet points per question</i>	Answers for Form Session <i>Write about 3-5 bullet points per question</i>	Compare and Evaluate <i>Write about 3-5 bullet points total per question on the difference between your non-video answers and the video answers</i> <i>a) The difference (if any)</i> <i>b) what caused or influenced that difference</i>
What could be improved?			Difference: Causes:

Part D: Articulate learning

Do this after doing all the columns in Part C above.

For 15-30 minutes, write 1-2 paragraphs in response to briefly summarize what happened, then write 3-5 bullet points each on the questions on what you learned based on your reflection.

Question	Answer
Enter the time you started this part of the assignment	
Summarize your most significant observations about what happened in your software development session.	(write about 1 paragraph)
Summarize the causes and what their effects/consequences were.	(write about 1 paragraph)

Question	Answer <i>Write about 3-5 bullet points per question</i>
What did I learn?	
How, specifically, did I learn it?	

Why does this learning matter, why is it important?	
In what ways will I use this learning?	
What goals might I set in accordance with what I have learned in order to improve myself and/or the quality of my learning and/or the quality of my future?
